

$$c = \frac{E}{B}$$

$$c = \frac{1}{\sqrt{\mu_0 \varepsilon_0}}$$

E = electric field amplitude
 B = magnetic field amplitude (instantaneous values)
 c = speed of light (3×10^8 m/s)

μ_0 = magnetic permeability in a vacuum, $\mu_0 = 1.3 \times 10^{-6}$ N/A²
 ε_0 = electric permeability in a vacuum, $\varepsilon_0 = 8.9 \times 10^{-12}$ C²/Nm²
